Thinking about graduate study in the biological sciences? 
Please join us for our open house event!

Graduate Study in Molecular, Cell and Developmental Biology

10 AM - 4 PM, Friday, October 23, 2015

Register by e-mailing Judith Edwards (jle422@uic.edu)

Activities include:
- Faculty research presentations and lab demonstrations
- An overview of our graduate program
- Poster session and lunch with our graduate students
- Tour of research facilities

Molecular, Cell and Developmental Biology (MCDB) is an area of graduate study and research in the Department of Biological Sciences at the University of Illinois at Chicago (UIC). The Ph.D. program prepares students for a broad range of careers in the life sciences, including basic and medical research, teaching, biotechnology and more. Cutting-edge research emphasizes important questions in areas such as cell biology, developmental biology, neurobiology, gene expression, chromatin structure/function, signal transduction, protein transport and structural biology through studies of genetic models including bacteria, single-celled eukaryotes, animals and plants.
