________________________________________________________________________________________________________________________________________________________

________________________________________________________________________________________________________________________________________________________

FACULTY INFORMATION

BIOS 391 is intended to allow the undergraduate student to explore a topic in biological sciences in greater depth than the student would encounter in one of our courses. A minimum of 1 hour per week discussing the material with you is recommended. If you feel it appropriate, you may require the student to write a short paper on the topic and what they learned. The final grade will be S (satisfactory) or U (unsatisfactory).

I have read this application and agree to work with this student on the project described above.
