

Research Area/ Degree Form

Please check the degree and research areas of study that you wish to make application to

DEGREE

- Ph.D.
- M.S. *Applications for the M.S. degree have low priority

RESEARCH AREAs: *Click one or more*

- Neurobiology / Molecular, Cell, & Developmental Biology
- Ecology & Evolution

POTENTIAL THESIS ADVISORS:

New students in the Neurobiology / Molecular, Cell, & Developmental Biology areas of study are required to do 7-week laboratory rotations with three faculty during their first year in the program. Students are matched with a thesis advisor before the close of the spring semester, rather than at the application review process or at admission. Listing faculty of interest to you below, as well as in your personal statement, is encouraged. See these links for a complete list of faculty in the [Neurobiology/Molecular, Cell and Developmental Biology](#) research areas.

Students are not admitted to the Ecology & Evolution area of study without a faculty member's support and commitment to serve as thesis advisor. Applicants should identify potential thesis advisors, make contact with them to discuss potential research efforts, and make note of this/these faculty both in the personal statement and list below. See this link for a complete list of faculty in the [Ecology & Evolution](#) research area.
